

## NPESG AUGUST 4<sup>TH</sup>

### Northern Plant & Ecology Study Group

Please join us for a Native Plant Study excursion, on Saturday August 4<sup>th</sup>, when the ANPC- NPESG explores the lush shoreline, and aquatic native plant habitat of beautiful Wolf Lake, Alberta.

Located W of Cold Lake, Alberta and E of Lac la Biche, this clear water glacial-origin lake abounds with lush shoreline and micro-habitat native plant species. Wild ferns and rare plants abound in the steep hilled, old-growth forest within adjacent Boreal Uplands. Be prepared to see 'rat root', river otter, beavers, moose, great blue herons, pelican's, loons and other wildlife. \* If time allows, a short hike up fern-filled creek to view *Conocephalum salebrosum*, *Matteuccia struthiopteris*, *Dryopteris intermedia*, and 300 year old *Betula papyrifera* trees.

\*Boat required. ANPC is researching canoe and/or kayak rental for interested persons. You will need proper hiking attire, lunch & snack's, lots of liquids, canoe or kayak, boat kit, fishing rods and your "discovery frame-of-mind".
